

Airport Manager's Report

May 20, 2020

1. Red dump truck went in for inspection and required all ball joints in the front and leaking transmission cooling lines to be replaced.
2. The truck for the snow removal grant has been ordered. It did not require the full amount of the grant, so we are also trying to purchase a gator type vehicle with a plow to use the rest of the money. It will also be our aircraft tug to replace the golf cart.
3. Continues to be awfully slow. Fuel sales are way off. We have room for a load of 100LL, but should we purchase now while prices are low or wait until sales pick up? I.E. should we spend the money now or save it?
4. John Kerrick donated a load of gravel and Justin re-did the area around the fuel farm. It looks nice. We will also do the areas around the runway signs and PAPI lights. Justin is working on cleaning up the equipment pad as well.
5. Mowing has started but very typical of this time of year it is difficult because so much of the property is still wet and muddy.
